Direct synthesis of nanocrystals with controllable shape and composition is still a big challenge in the synthetic community. We report a one-pot, surfactant-free and template-free synthesis of yoked, boron-doped and undoped SiGe nanocrystals via dynamic urea hydrolysis. The yoked SiGe nanocrystals are synthesized via a two-phase reaction, with rod- and ball-shaped nanocrystals with tunable aspect ratios of 3-100 produced. The boron-doped SiGe nanocrystals have high-quality structural and electronic properties, with the synthesis using a dynamic environment leading to boron doping at low concentrations.FCB Spanyol FCB Spanyol was a Spanish football f678ea9f9e
